Psychological Test and Assessment Modeling, Volume 60, 2018 (2)

Contents

Special Topic:
Advances in Educational Measurement
Guest editors: Andreas Frey, Christoph König & Christian Spoden

141 Guest Editorial
Andreas Frey, Christoph König & Christian Spoden

145 Development and implementation of a machine-supported coding system for constructed-response items in PISA
Kentaro Yamamoto, Qiwei He, Hyo Jeong Shin & Matthias von Davier

165 Item position effects in a reading comprehension test: An IRT study of individual differences and individual correlates
Gabriel Nagy, Benjamin Nagengast, Michael Becker, Norman Rose & Andreas Frey

189 Modeling and predicting non-linear changes in educational trajectories: The multilevel latent growth components approach
Christoph Kiefer, Yves Rosseel, Bettina S. Wiese & Axel Mayer

223 Measurement of teachers' reactive, preventive and proactive classroom management skills by student ratings – results from a two-level confirmatory factor analysis
Christian Spoden & Katharina Fricke

241 Modeling item position effects with a Bayesian item response model applied to PISA 2009–2015 data
Matthias Trendtel & Alexander Robitzsch

265 How many classes are needed to assess effects of instructional quality? A Monte Carlo simulation of the performance of frequentist and Bayesian multilevel latent contextual models
Christoph Helm

Psychological Test and Assessment Modeling (Psychol Test Assess Model)

formerly Psychologische Beiträge/Psychology Science *Quarterly*

Indexed in **Directory of Open Access Journals, PsycINFO, Psyndex**

Self-evaluated impact factor (according to Kubinger, Heuberger & Poinstingl, 2010),
2010: 0.565; 2011: 0.525; 2012: 0.783; 2013: 0.420; 2014: 0.354, 2015: 0.370, 2016: 0.400

Editor:
Klaus D. Kubinger
c/o Division for Assessment and
Applied Psychometrics
Faculty of Psychology
University of Vienna
